SUMMARY

Senior software engineer with 7 years of experience building full-stack web and mobile applications with TypeScript, React, React Native, Node.js, and PostgreSQL. At Cenergistic, I owned two products end to end: Measure, a data-management platform, and the GreenX Executive mobile app. I was responsible for architecture, API design, code review, and releases on both, and I mentored the engineers who worked on them. I'm comfortable taking loosely defined requirements and turning them into features that hold up in production.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, SQL

Frontend: React.js, React Native, Next.js, Redux, Zustand, MUI / MUI-X, D3, VisX, Victory Charts, Recharts

Backend & Data: Node.js, PostgreSQL, Prisma, Elasticsearch, MongoDB, DynamoDB, Firebase, RESTful APIs

Infra & Tooling: AWS, Docker, Terraform, Cypress, Puppeteer, Git, Prompt Engineering

WORK EXPERIENCE

Liquidity - Richardson, TX

Senior Software Engineer

Oct 2026 – Present

Cenergistic - Dallas, TX

Senior Software Engineer

Jul 2025 – Oct 2026

- **Promoted to own two products end to end:** Measure, a data-management platform, and the GreenX Executive mobile app.
- **Product owner and technical lead for Measure**, responsible for architecture, code review, and delivery across a React/TypeScript client and a Node.js/PostgreSQL backend.
- **Owned the GreenX Executive mobile app** (React Native) end to end, including architecture, feature delivery, and releases. The app gives executives a high-level view of program health: audit totals by category, monthly alert quotas, team members, and building lists.
- **Established AI-assisted development workflows** (Claude Code, GPT, Copilot) that raised team throughput and kept code-review standards consistent.
- **Mentored engineers on the team** through code review and pairing, onboarding developers onto the Measure codebase and modern web practices.
- **Helped establish the unit testing** standard for Measure using Vitest, covering business logic, API handlers, and React components, and added a CI/CD rule requiring at least 80% coverage on new code for every Measure PR.

Software Engineer

Nov 2021 – Jul 2025

- **Built the bulk of Measure**, a data-management platform, delivering frontend and backend features from requirements through production, and later earned ownership of the product.
- **Led the migration of core datasets from Elasticsearch to PostgreSQL**, moving off a document model that couldn't support the relational reporting the product needed. This improved query performance and simplified the data layer.
- **Designed and shipped RESTful APIs and PostgreSQL schemas** that standardized data access across services.
- **Built interactive dashboards and custom data grids** with advanced filtering and frontend-driven server-side pagination to keep large, client-facing datasets responsive.
- **Developed rich data visualizations** (charts, graphs, tables) using MUI-X, D3, Victory Charts, and VisX.

- **Drove the modernization of GreenX** from a legacy vanilla-JS codebase to a React.js + TypeScript stack with React Query and Context API.
- **Designed and deployed Puppeteer / Node.js scrapers** that automated data collection powering data-driven GreenX features.

Wipro Limited - Plano, TX

Software Engineer

June 2019 – Nov 2021

- **Led development on PHEAA** (React.js / Node.js) and contributed to East West Bank (React Native), across design, implementation, and deployment of frontend and backend features.
- **Served as lead developer for the second half of PHEAA**, directing the dev team, managing the Jira board, and creating and assigning tickets.
- **Delivered unit-tested systems** within customer-prescribed timeframes.
- **Communicated project milestones** to internal personnel and external stakeholders.

SIDE PROJECTS

LocalFlow 2026

- **Designed and built a fully offline macOS dictation app** (a Wispr Flow clone) as a native Swift/SwiftUI menu-bar app. Global hotkeys drive dictation and a command mode for rewriting, copying, and launching apps.
- **Built an on-device speech pipeline** using WhisperKit (Whisper large-v3) for transcription and a local Ollama LLM for cleanup, so nothing leaves the machine.
- **Built it through prompt engineering with Claude**, architecting the app and driving it to completion with AI-assisted development.
- **Shipped it end to end**: code-signed, installed, and published open source on GitHub (github.com/kkeef11/localflow).

Policy Rage Oct 2023

- **Built a requested prototype portal** for an insurance company to view policies, clients, revenue, and quotes.
- **Stack**: React.js / Zustand frontend, Node.js backend, PostgreSQL.

EDUCATION

Texas A&M University - Commerce

Bachelor of Science, Computer Information Systems - Commerce, TX, May 2019
